When growth becomes more rapid in relation to the growing total number, then it is exponential. What is an exponential relationship? Exponential relationships are relationships where one of the variables is an exponent. So instead of it being '2 multiplied by x', an exponential relationship might have '2 raised to the power x': Usually the ...

What is the difference between exponential and linear?

The log of a times b = $\log(a) + \log(b)$. This relationship makes sense when you think in terms of time to grow. If we want to grow 30x, we can wait $\ln(30)$ all at once, or simply wait $\ln(3)$, to triple, then wait $\ln(10)$, to grow 10x again. The net effect is the same, so the net time should be the same too (and it is).
