This course describes Bayesian statistics, in which one's inferences about parameters or hypotheses are updated as evidence accumulates. You will learn to use Bayes' rule to transform prior probabilities into posterior probabilities, and be introduced to the underlying theory and perspective of the Bayesian paradigm.

A chi-squared test (also chi-square or  $\chi^2$  test) is a statistical hypothesis test that is valid to perform when the test statistic is chi-squared distributed under the null hypothesis, specifically Pearson's chi-squared test and variants thereof. Pearson's chi-squared test is used to determine whether there is a statistically significant difference between the expected frequencies and the ...

Text-to-image synthesis has taken ML Twitter by storm. Everyday, we see new AI-generated artworks being shared across our feeds. All of these were made possible thanks to the VQGAN-CLIP Colab Notebook of @advadnoun and @RiversHaveWings. They were able to combine the generative capabilities of VQGAN (Esser et al, 2021) and discriminative ability of CLIP (Radford et al, 2021) to produce the ...

This is reflected in statistics showing that risky behavior in adolescence is linked with an elevated risk to health. In Germany, for example, 62% of all deaths among persons aged 15 to 20 are due to traumatic injuries. The most common causes of death are motor vehicle accidents, other accidents, violence, and self-injury.

In [BKS97], the factoriality was established by Bozejko, Kümmmerer and Speicher. when  $\dim(HR)$  is infinite. By making careful estimates of norms of certain operators on the  $q$ -deformed full Fock space, Sniady established the factoriality when  $\dim(HR)$  is finite but greater than a constant depending on  $q$ . It was finally settled in [R05]
